The following listing of claims will replace all prior versions and listings of the claims in the

application:

Claim 1 (currently amended): A system for protecting a roadway structure from damage caused by

vehicular traffic and vice versa, the roadway structure extending above a roadway pavement, the

system comprising:

a resilient, replaceable collar having a body with upper and lower surfaces, an opening

provided therethrough and sized to accommodate the outer periphery of the roadway structure, and

sloped side walls extending downward from the upper surface of the body towards the lower surface

of the body, wherein the upper surface of the body is substantially planar and is in substantially

planar alignment with an upper surface of the roadway structure; and

at least one resilient riser provided between the lower surface of the collar body and an upper

surface of the roadway pavement, the resilient riser having a thickness so that the collar body and

resilient riser together have a height substantially equal to the distance the roadway structure extends

above the roadway pavement, wherein the lower surface of the collar body is planar and is in planar

alignment with a planar upper surface of the resilient riser, the resilient riser maintaining the

substantially planar alignment between the upper surface of the roadway structure and the upper

surface of the collar body,

wherein the resilient, replaceable collar and the resilient riser are made of cured, recycled

rubber scrap from tires.

Claim 2 (currently canceled).

Amendment dated February 4, 2004

Reply to Office Action of November 4, 2003

Claim 3 (previously amended): The system as recited in claim 1, wherein the roadway structure

comprises one of a manhole, a catch basin, or a utility access conduit.

Claim 4 (previously amended): The system as recited in claim 1, wherein the roadway pavement

comprises one of asphalt, gravel or concrete.

Claim 5 (previously amended): The system as recited in claim 4, wherein a portion of the roadway

pavement is stripped away so that the roadway structure extends above the roadway pavement.

Claim 6 (previously amended): The system as recited in claim 1, wherein the resilient, replaceable

collar is circular with a central circular opening to snugly engage a cylindrical element of the

roadway structure.

Claim 7 (previously amended): The system as recited claim 1, wherein the resilient, replaceable

collar is one of square, rectangular, hexagonal, or octagonal with one of a circular, square or

rectangular central opening to snugly engage one of a circular, square or rectangular element,

respectively, of the roadway structure.

Claims 8 and 9 (previously canceled).

Claim 10 (currently canceled).
